Caterpillar makes no representation or warranty about the information contained in this document or the products referenced herein. Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1.0 Introduction

Creating a custom bag for sample tubing that has an easy access hole and contamination cover is a convenient way to organize and carry sample tubing in service trucks. This prevents unnecessary contamination and waste of tubing.

2.0 Best Practice Description

The bag design is portable, able to hold a full roll of sample tubing and will include a sealable cover to keep contamination out of the access hole where the end of the tubing can be accessed.

3.0 Implementation Steps

Insert a full roll of tubing into the bag. Put the end of tube through the access hole and close the cover over the end of the tube. To access and use the tubing, pull back the cover and dispense the correct amount of tubing without contaminating the rest of the roll.

4.0 Benefits

Contamination control.

Reduction in wasted tubing.
