1.0 Introduction

Unnecessary time was being used to manually enter Continuous Improvement (CI) suggestions that were documented on paper into Excel. At the same time, a lot of paper was being used needlessly. Situations had occurred where ideas and suggestions were being misrepresented through double handling of information. Also, there had been instances of lost CI papers which lead to wasted time attempting to rectify. This process was also deemed not entirely efficient as decisions made about suggestions were communicated to the technicians manually. As a result, some technicians could not be informed about the final status of their continuous improvement proposal.

2.0 Best Practice Description

In the current situation, technicians write their suggestions one by one on paper. The paper is left on the board and the quality expert takes it from the papers and manually makes an excel entry. The proposal is then evaluated by a committee and the technician is expected to be informed of the final status of the proposal by the relevant engineer and the relevant team leader. Borusan has come up with a more efficient process to capture CI initiatives and replace their CI board.

There is a feature such as recording the data of the current application on a platform that can be accessed by the quality expert after the user clicks the button. Each record is transmitted to the online platform in an accessible format. Data can be opened in preferred formats such as Excel, pdf, html. In addition, there is an ability to send notifications to encourage technician. The desired notifications will be able to send to technicians and it is possible to add visuals to the notification content. If technicians will transmit suggestions by using the application, it will be prevented from entering the suggestions written on paper one by one in Excel.

3.0 Implementation Steps

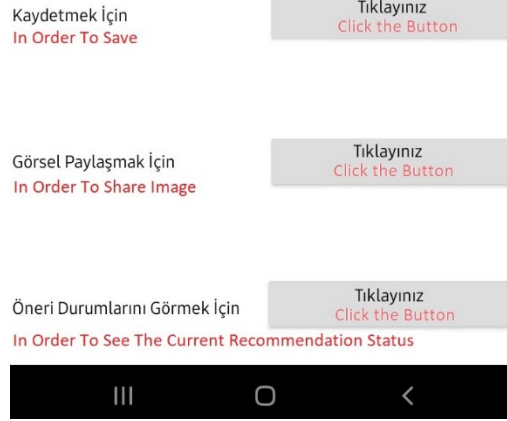

Step 1: Click the application icon and enter the application. While using the application, the device must be connected to the internet.

Step 4: After the entries are completed, the "Click to Save" button is clicked and the "Registration Successful" notification is displayed to the user.

Step 5: For the user who wants to send the photo of the proposal, the "Click to Share Image" button is clicked and the screens where the user can take a photo and then send the photo are shown. The user is given the opportunity to take as many photos as they want with the "Try Again" option. When the "OK" button is clicked, the photo that is selected to be sent as an E-mail.

Step 7: Evaluation results are shared as push notifications. This feature is also used to encourage technicians to give suggestions.

Note:

- If a dealer wishes to develop their own application, please reach out to Serdar for assistance (contact in Acknowledgements section).
 - Borusan used an application called Kodular to build this application utilizing a modular programming technique.
- All the technicians have an android device. Therefore, this application is only available on Android and is not accessible from the Google Play Store.

---	-------------------	-----------------	-------------------------

4.0 Benefits

- 1) Fast tracking mechanism
- 2) Process efficiency with digitalization
- 3) Sharing the results of the suggestions instantly with the relevant technicians
- 4) Instant notification of the technicians who needs feedback
- 5) Simple and user-friendly application interface
- 6) Elimination of the paper waste

5.0 Resources Required

Item	Requirements
Material	0\$
Labor (as money)	0\$

There may be costs associated with outsourcing application development if dealer's IT department is unable to product it 'in-house'.
