DISCLAIMER: The information and potential benefits included in this document are based upon information provided by one or more Cat® dealers, and such dealer(s) opinion of “Best Practices.” Caterpillar makes no representation or warranty about the information contained in this document or the products referenced herein. Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1.0 Introduction

The manipulation of the mining equipment components becomes a challenge because of its weight and volume, which can lead to accidents during the installation and removal process. A device is needed to reduce the risk and accident probability.

The process of removing the pin that holds the cable (while the body is up) has generated accidents caused by beatings and/or smashes due to the manipulation of these elements.

2.0 Best Practice Description

The solution consists of designing a device that reduces accidents to hands, which keeps the hands away from the danger zone; allowing the mechanic to carry out this activity safely and quickly. (Figure 1)

3.0 Implementation Steps

- Design and manufacture the tool shown.

4.0 Benefits

- Reduce the accident risks while the 793 trucks are under maintenance.
- Maintenance process standards improvements.
- Improving the conditions of workers exposed to ergonomically incorrect working positions.
- Improved customer's perception.

5.0 Resources Required

The necessary elements to implement the Best Practice are:

- Workforce
- Materials (according to the drawings)
- Tools

6.0 Supporting Attachments / References

- Design drawings available upon request.
- EDITOR'S NOTE: Caterpillar will soon have a tool similar to this available and will be available to dealers. You may request plans from Gecolsa to fabricate your own, or order one from Caterpillar when it becomes available. This should be available sometime late 2013.
