DISCLAIMER: The information and potential benefits included in this document are based upon information provided by one or more Cat® dealers, and such dealer(s) opinion of “Best Practices”. Caterpillar makes no representation or warranty about the information contained in this document or the products referenced herein. Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1.0 Introduction

It is important that after a wheel group has been rebuilt, it is properly sealed and protected for storage in an exchange program inventory or for shipping to a job site.

This Best Practice contains a list of part numbers for all the covers, caps, plugs, seals, and hardware used by the factory to ship and store wheel groups.

2.0 Best Practice Description

The attachment to this Best Practice is a spreadsheet for all the part numbers required for professional storage and shipping of wheel groups. The only part that does not have a Caterpillar part number is the plastic caps used to cover the wheel studs. The supplier and supplier part number are provided in the attachment.

3.0 Implementation Steps

Standardize a preparation for shipping process to include the installation of seals, covers, plugs, etc. Most of these parts are reusable.

OHT Rear Wheel Shipping Covers	DATE 2/18/2015	CHG NO 01	NUMBER 0912-4.01-1195
--------------------------------	-------------------	-----------------	--------------------------

4.0 Benefits

- Protects the component from handling damage during storage and shipping.
- Improves the quality appearance and image of the component.
- Helps to prevent corrosion and contamination of the component.

5.0 Resources Required

- Supply of the needed parts.
- Standard process to prepare a wheel group for shipping.
