Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1.0 Introduction

Many dealer Component Rebuild Centers study shop processes and re-align them to a factory-like workflow. The focus is to create standardized processes and uninterrupted work efficiency.

This Best Practice contains Ferreyros' shortage/parts delivery process and short block rebuild kit for 3500 series engines.

2.0 Best Practice Description

This Best Practice is an engine block rebuild kit with special storage/delivery carts.

The short block kit contains both new and reused parts. The parts are arranged on the cart in the order that they are used. This saves time for the technician when all parts required are unwrapped and unboxed, ready to install, and arranged in the order that they will be needed.

The storage/delivery cart itself is sealed for contamination control with reusable plastic covers and portable vapor capsules that contain corrosion inhibitor. This saves wrapping and unwrapping time and reduces the consumption of plastic wrap.

The cart is stored in a staging area and only delivered to the work bay at the moment that it is required.

3.0 Implementation Steps

- Design and fabricate cart.
- Determine layout.
- Designate responsibility for managing carts / kits.

Short Block Kit Staging Area

- Wheeled carts
- Sealed for CC
- Parts arranged in same order used.

4.0 Benefits

- Efficient use of skilled assembly technician time.
- No lost time wrapping and unwrapping parts.
- Parts located exactly where they need to be – no lost time searching for parts.
- Effective use of out-of-bay staging and floor space.

5.0 Resources Required

- Weld / Fabrication shop.

6.0 Supporting Attachments / References

None.
