1.0 Introduction

Borusan Makina Kazakhstan has developed a stand for storing adapters and plates used in transmission and torque converter tests. The stand is very practical and improves safety when storing and handling adapters and plates.

2.0 Best Practice Description

The adapters and plates used in transmission tests used to be stored on the ground or leaning on the wall. Some of the plates weigh more than 50 kg. If the plates fell or slipped, they could cause serious injuries to people nearby.

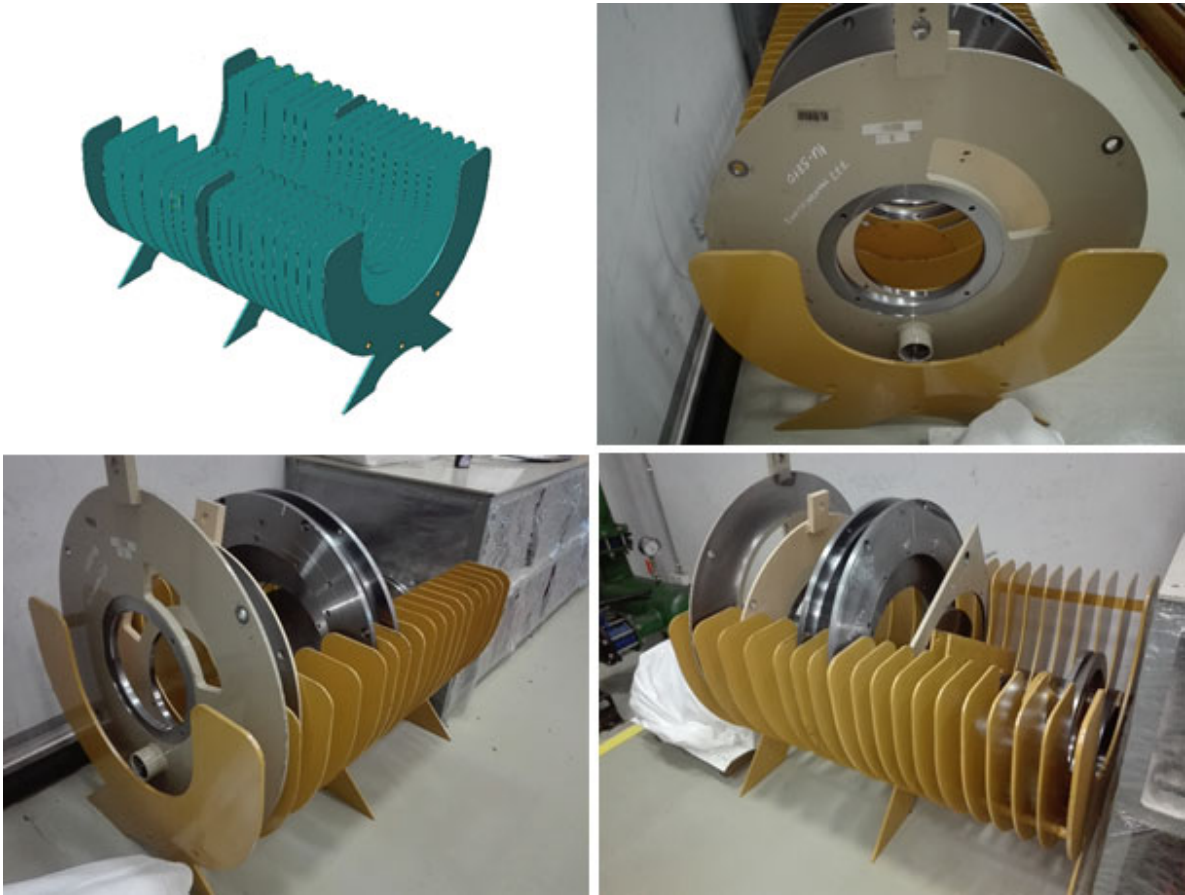

BEFORE

To address this hazard, a storage stand has been designed for the plates. The stand is made from several different sized sections (keeping the Six Sigma 5S principles in mind), to hold 18 adapters and plates up to 950 mm wide. The dimensions of the stand can be changed to fit the needs of the dealer.

AFTER

3.0 Implementation Steps

The following drawings show the designs with the dimensions (in millimeters) of the stand.

4.0 Benefits

- Safer work environment;
- 5S – Sort, Set in order, Shine, Standardize and Sustain (Six Sigma)

5.0 Resources Required

- Drawings;
- Welding shop.

6.0 Supporting Attachments / References

The drawings required are attached to this Best Practice.
