Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1. Introduction

Ferreyros has developed a tool to improve the assembly process of the final drive truck 793 - 797. The tool is designed to install sun gear for the technical component does not manipulate with their hands, also prevents damage to the sun gear to move its base. Caterpillar does not have a special tool for this process.

2. Best Practice Description

The installation of the sun gear in the Planetary was very manual, making the technician use their hands on the sun gear to align with the planetary of the final drive. The technician then releases the sun gear, moving towards its base.

This procedure does not allow the technician to quickly and safely install the sun gear. The alignment of the sun gear with the planetary is difficult and endangers the hands of technician.

Since tool prints are not currently available, the following photos show the fixture and process.

INSTALLER SUN GEAR

Next, install the tool on the sun gear to lift the component with a chain; the tool aligns the sun gear towards the planetary.

At time of installation, the technician does not use their hands on the sun gear until tool is removed.

INSTALL SUN GEAR

REMOVE TOOL

Remove the tool once installed safely in the sun gear. This same tool should be used for the removal process, because it minimizes risks during the operation for the sun gear and the people around.

3. Implementation Steps

Design a tool.

4. Benefits

- Improve operator safety.
- Improve process efficiency.
- Prevents damage to the sun gear during remove or install.
