DISCLAIMER: The information and potential benefits included in this document are based upon information provided by one or more Cat® dealers, and such dealer(s) opinion of “Best Practices.” Caterpillar makes no representation or warranty about the information contained in this document or the products referenced herein. Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1.0 Introduction

Borusan Makina Kazakhstan has developed a special rack for spacer plates of all CAT engines that holds spacer plates in a vertical position.

Previously spacer plates were stored in horizontal position. During preparation for assembly, assembly technicians had to spend time on locating the needed spacer plate and handling other spacer plates that were above the required spacer plate.

2.0 Best Practice Description

To eliminate the need for searching and handling spacer plates, the special rack was developed. This rack has baffles that hold long spacer plates and prevent from leaning on other plates. Number of baffles depends on the dealer engine turnover. There is also a bottom compartment for storage of smaller spacer plates of 3500 series engines.

Below are before-after photos of spacer plate rack storage.

3.0 Implementation Steps

- Design the spacer plate rack as per the dealer engine turnover.

4.0 Benefits

- Good storage and eliminates excess handling of spacer plates
- No damage to spacer plates during storage and handling
- Reduced time during preparation for assembly

5.0 Resources Required

Minimal expense to fabricate the rack.
