DISCLAIMER: The information and potential benefits included in this document are based upon information provided by one or more Cat® dealers, and such dealer(s) opinion of “Best Practices”. Caterpillar makes no representation or warranty about the information contained in this document or the products referenced herein. Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1.0 Introduction

This Best Practices is a fabricated tool to install camshaft bearing on Caterpillar 3500 series engines. It can install one entire bank of bearings at the same time. It is adaptable to handle 3508, 3512, and 3516 engines.

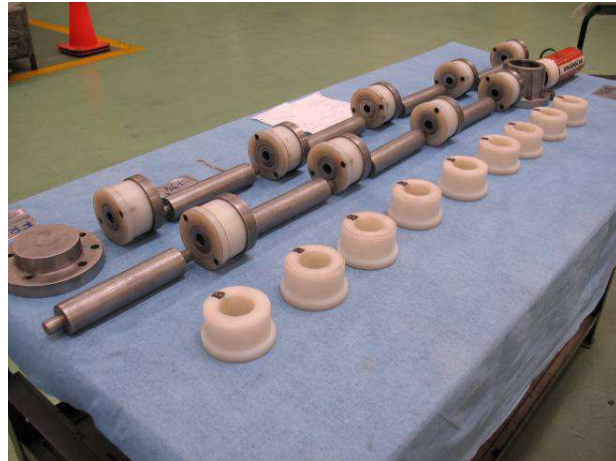

The tool significantly reduces the time required to install camshaft bearings and improves technician safety compared to other manual installation methods.

2.0 Best Practice Description

Tool installed in 3516.

Tool segments and press.

3.0 Implementation Steps

The following are the drawings and cylinder specifications required to fabricate the tool. Downloadable drawings can be found as attachments to this Best Practice.

4.0 Benefits

- Reduces labor required to install camshaft bearings
- Improves quality of installation.
- Improves technician safety and ergonomics.

5.0 Resources Required

- Machine shop to fabricate assemblies.
- 70,000 kPa (10,000 psi) hydraulic power supply for cylinder.
