Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1.0 Introduction

In today's CRC environment where CRC efficiency is required, most dealers strive to minimize work interruptions. Any time a technician must leave his work bay, this creates an interruption.

Gecolsa, the Caterpillar dealer in Colombia, has recently implemented a process in the shop to deliver supplies and consumables to each of the 44 different work bays twice a day, using a stocked delivery cart for this purpose. Supplies and consumables are stored in the tool crib, and under the new process, tool crib personnel deliver supplies to the work bays using a fully stocked cart.

Technicians no longer need to leave their workstation in order to get common supplies and consumables.

The delivery of supplies using a "supply cart" is far more efficient than the almost daily technician trip to the tool room previously required. In addition, this practice eliminates a common work interruption and better utilizes the time of skilled technicians.

2.0 Best Practice Description

Before

After

Previously, the supplies and consumables delivery process was centralized. Technicians were responsible for getting their own supplies. Technicians had to leave their work bays, walk to CRC Tool Room and order supplies or tools required for their tasks.

In order to increase efficiency, a supply delivery process was developed. The target was to deliver supplies directly to CRC work bays. A special delivery cart was designed to hold commonly consumed items and easily transport them to the workstations.

Delivery of supplies to CRC work bays (Supplier Cart)	DATE 6/7/2017	CHG NO 01	NUMBER 1007-4.5-1093
---	------------------	-----------------	-------------------------

3.0 Implementation Steps

- Communicate new process to CRC personnel.

Before

After

ITEM	ACTIVITY	RESPONSIBLE	ACTION
	Start		
1	Need is identified	Technician	Technician identify need in work bay
2	Technician goes to Tool Room	Technician	Technician goes to Tool Room and ask supplies
3	Tool Administrator deliver the supplies	Tool Administrator	Tool Administrator deliver supplies asked by Technician
4	Receive and go back	Technician	Technician received supplies and go back to work bay
	End		

ITEM	ACTIVITY	RESPONSIBLE	ACTION
	Start		
1	Goes to cross his route	Tool Administrator	Tool Administrator goes with the cart to cross the route thru CRC work bays
2	Arrives to work bay and Technician ask supplies required	Tool Administrator	Tool Administrator arrives to work bay where is waited for technicians who ask for supplies required for its tasks
3	Ask data and deliver supplies	Tool Administrator	Tool Administrator request data to technicians (WVO, ID), deliver supplies
4	Finish his route	Tool Administrator	Once Tool Administrator cross all bays, comes back to Tool Room
	End		

- Determine a supply list - with the highest demand.

Supply lists includes such items as rolls of plastic for Contamination Control, sand paper and emory cloth, loctite, brushes, silicon, markers, gloves, gasket compound, o-ring compound, duct tape, greases, cleaners, penetrating oils, paper towels, etc. See attachments for a parts list and part numbers.

3.1 Establish a model of inventory EOQ (The Economic Order Quantity (EOQ) Inventory Model)

- Define
 - When to enter an order for an item - minimum stock level. (Re-order point)
 - Quantity to order – maximum stock level.
 - Average consumption rates for fast moving items.
- Design the best route to deliver the supplies, as per bay's needs.

4.0 Benefits

Between benefits obtained by this implementation are:

- Reduce in dead time to get supplies. (Saves 80%)
- Improve supply consumption control.
- Increase quality of Tool Room service.
- Reduce in congestion and waiting at tool room.
- Less technician interruptions.
