DISCLAIMER: The information and potential benefits included in this document are based upon information provided by one or more Cat® dealers, and such dealer(s) opinion of “Best Practices”. Caterpillar makes no representation or warranty about the information contained in this document or the products referenced herein. Caterpillar welcomes additional “Best Practice” recommendations from our dealer network.

1.0 Introduction

Certain areas in dealer shops require frequent consultation of Caterpillar literature. Information in guides and manuals contains steps to accomplish assembly or disassembly, schematics of components, and other important information.

This Best Practice presents a solution in the form of a shop-installed computer workstation connected wirelessly to the Internet, providing all needed Caterpillar information quickly and easily.

2.0 Best Practice Description

Optimizing resources, such as tools and labor-hours, is an important aspect within processes. In the case of shops, technical areas get support in the form of parts manuals and equipment schematics that are available in Caterpillar applications on Internet.

Three years ago, necessary literature had to be printed and distributed to technicians of the shop by the literature analyst. This technique incurred costs like: paper, prints, and time of literature analyst and technicians to obtain parts manuals needed. A bottleneck was created while the literature analyst delivered manuals to technicians. To relieve this bottleneck, a new project was implemented.

The project consisted of installing wireless workstations in each bay of the shop where technicians would have access to Internet and therefore to Caterpillar literature.

3.0 Implementation Steps

- Configure and/or install a wireless network.
- Assemble wireless workstation, details are shown on figure 1.
- Configure each workstation with needed options

4.0 Benefits

- Improved labor cost profit margins
- Optimization of man-hour labor
- Increased shop productivity and higher revenues
- Reduce time on getting information from manuals
- Online access to updated information in all areas

5.0 Resources Required

- Wireless network: Allow access to Internet and applications.
- Training for technicians and supervisors to know how to operate workstation
- Thin Client with wireless card: Allow thin client get connected to wireless network
- 15" Flat Monitor
- Barcode Scanner: Its function is to read technician's ID from their ID card and code labeled on the piece or component
- Keyboard with touchpad

- Uninterruptible Power Supply: Provides battery backup power it also safeguards equipment from damaging voltage surges
- SIS WEB Workstation Stand: It is built with fiberglass from a local supplier, 24.5 lbs, for more specifications see drawings
- Bar Code Printer (Optional just for Receiving and dispatch area): Printer is used for printing barcodes to label the components, pieces, or tools for traceability
- Trained personal to configure workstations

Cost Details

Item	Description	Price(\$US)
1	Adesso Keyboard with Touchpad (Black)*	70
2	Barcode Scanner (Symbol LS-9208)	150
3	Workstation stand**	400
4	15" LCD Monitor	160
5	Barcode label printer (Zebra TLP-2844)	500
6	Thin client + wireless card (HP 57XX)	370
7	APC Back-UPS*	150
Total	1800	

* Price do not include import duty

** Drawings match with models listed above

6.0 Supporting Attachments / References

- Queue time study.xls – Spreadsheet showing changes in queue times before and after installation of workstations.
- Flow Processes vs. Cost Chart.pdf – Details the process and cost savings of implementing the workstations in shops.
- Drawings.pdf – Engineering drawings of the workstation stand
