The following document is provided as a resource for Caterpillar dealers and customer mine sites. Content was provided by one mine site to be shared with others as a suggested practice. Caterpillar shares it with you as a reference, not a requirement, and has not written, edited, validated, or specifically endorsed the content. Caterpillar reserves the right to add to, delete from, or remove this document entirely at any time in the future.

1.0 Introduction

Safety is a top priority. Often, company safety programs are based around monitoring and reporting safety incidents and responding to and monitoring the frequency of safety incidents. Local safety laws usually require this minimal practice. As a reactive process, such a program has limited ability to prevent safety incidents from occurring.

Some dealers have developed CRC and shop safety inspection checklists based around known requirements and collective safety knowledge. Making periodic inspections using a well-developed, exhaustive checklist is a proactive practice to improve safety.

This Best Practice shares an example of a safety inspection checklist used by one dealer. Due to regional differences in occupational health laws and regulations, the calculation methods, the frequency of checks, and the requirements listed in the checklist must be reviewed and modified as appropriate for your local area.

2.0 Best Practice Description

This is a process by which safety inspections of the CRC are made on a periodic basis, weaknesses are identified, and corrective measures are taken to improve working safety conditions.

A company safety specialist who is familiar with safety requirements and laws should perform the inspections.

To assist with the inspection process, a checklist should be developed and utilized. The recommended categories of items include:

- **Administration:** Includes policy, records, and other administration-level items
- **Training:** Defines the breadth and depth of safety training for employees
- **Risk Management:** Performing risk assessments
- **Emergency Contingencies:** Preparedness for evacuation emergencies
- **Communication:** Existence of various safety meetings
- **Management:** Tracking and recording, Safety Act Observations
- **Suppliers:** Safety efforts on part of dealer suppliers (i.e., require proper licensing)
- **General Facilities:** Inspection for safety efforts and practices in all dealer facilities
- **Risk Assessment:** Practice of planning activities safely before performing them
- **General Attributes:** Addressing various specific risks
- **Maintenance Department:** Safety concerns for maintenance workers
- **Tool Store & Shop Tooling:** Addresses various safety risks in the shop
- **Parts:** Safe practices in parts warehouse including fork trucks and rack storage
- **Laboratory:** Use of protective equipment and chemical storage in dealer lab
- **Contract Mining:** Ensuring the safety practices of the dealer are followed at contract sites
- **Office Administration:** Addresses safety concerns in an indoor office environment
- **Paint Shop:** Protective equipment and ventilation

CRC Safety Inspection Checklist	DATE 4/12/2017	CHG NO 01	NUMBER 0607-4.4-1083
---------------------------------	-------------------	-----------------	-------------------------

- **Machine Shop:** Minimizing common risks found in the machine shop
- **Fabrication:** Safety of welding metal structures
- **Dyno Cell:** Ventilation, noise issues
- **Field Service & Pit Work:** Minimizing risk to those person who work alone in field service

The checklist is formatted in an Item/Evidence format. The checklist items are in the left column with indicating examples in the right. It is recommended to modify these items to suit your dealer.

3.0 Implementation Steps

An example of an actual CRC safety inspection checklist is attached to this Best Practice.

If this checklist is utilized, it should be customized to meet any special local requirements. The Excel file can be edited as necessary.

4.0 Benefits

- Supports a proactive safety program.
- Creates standards and consistency in a periodic inspection process.

5.0 Resources Required

A Qualified Safety Inspector.

6.0 Supporting Attachments / References
